Hi sis! Make it double haha ;)

I reviewed your work, love how you didn't reinvent the wheel in your implementation, smart!

Regarding the checksum, Meowth suggested for using a standard error detection mechanism, you can use a similar algorithm of Ethernet's checksum, but keep it simple...

I hope it will keep Ash outside of our servers!

James,
Team Rocket inc.

Sup James! Prepare for trouble... just kidding.

I'm trying to implement our server communication protocol, do ya think we need some kind of checksum?

Jessie,
Team Rocket inc.
